SIMPLEX SPLITTING MAUL

Combining two tools into one, a splitting maul and a soft-face mallet of the highest professional quality, splitting maul offers a significant savings in cost compared to the individual purchases of the tools.

Made from high-grade carbon steel, the drop-forged splitting insert delivers extremely high splitting action thanks to its turned nose. The superplastic insert with D60mm is a medium hard plastic insert. Using the soft side when wedging the wood open entirely eliminates the risk of injury from metal splinters.

Made of cast iron, the housing comes with an integrated handle protection sleeve that provides for a high level of break resistance. The long-fibre and ultra durable hickory handle is varnished and shaped ergonomically.

Application Areas: Motor manual wood harvesting, safe and material-friendly driving of steel wedges with the superplastic insert, splitting of 1-metre logs, splitting felled timber with a wedge, driving of fittings in sensitive environments, gardening and landscaping.
