SOFT-FACE MALLETS WITH BREAK-PROOF STEEL TUBE HANDLE & ERGONOMIC ANTI-SLIP GRIP

The tubular head of the SUPERCRAFT soft-face mallets is filled with steel shot. The resulting effect is that the energy of the steel shot is transferred with a slight delay when the mallet's contact surface hits the workpiece. The reduced rebound allows the impact energy to be absorbed with perfect efficiency. The inserts offer outstanding impact qualities and are guaranteed to combine maximum strength with unique durability. They consist of extruded and extremely homogeneous material. This version comes with a break-proof steel tube handle and an ergonomically shaped non-slip rubber grip.

Code	Ø	—i—	—i—	Weight(gr)
